

Japanese Laid-Open Utility Model Application 57- 161068

Filing Date: March 31, 1981

Title of the Invention: OPTICAL FILTER SWITCHING MECHANISM OF OPTICAL  
READING DEVICE

Applicant: Fujitsu Kabushiki Kaisha

***Partial Translation***

2. Scope of the Claim

An optical reading device which reads an image on a document, comprising:  
a plurality of optical filter plates in which spectra characteristics are different;  
a filter unit main body in which the plurality of optical filter plates are arranged on one  
surface and integrally fixed;  
a guide frame mounted at a reading position of the image and in which the filter unit  
main body is engagingly inserted; and  
a position setting member which sets and holds the filter unit main body which is slid  
within the guide frame at a plurality of positions;  
wherein the guide frame is detachable.
